

Quick start

What you want	Enter this	To create this
Internal Wiki link	<code>[[BLAST]]</code>	<u>BLAST</u>
Internal Wiki link w/ display name	<code>[[BLAST tblastn]]</code>	<u>tblastn</u>
External Wikipedia link	<code>[[w:The Beatles The Fab Four]]</code>	<u>The Fab Four</u>
Bare URL	<code>http://www.google.com/</code>	<u>http://www.google.com/</u>
Display an image	<code>[[Image:Bioperl-pub-data.png]]</code>	
URL w/ display name	<code>[http://www.google.com/ Search Google]</code>	<u>Search Google</u>
Put page in category	<code>[[Category:Tools]]</code>	<i>(link to other Tools in page footer)</i>
Sign your name with date	<code>~~~~</code>	<u>Tseemann</u> 02:11, 28 December 2005 (EST) <i>(for example)</i>
Filenames, paths, \$ENV_VARS	<code><TT>\$PREFIX/lib/perl.so</TT></code>	<code>\$PREFIX/lib/perl.so</code>
Inline code examples	<code><CODE>\$fh->print("BioPerl")</CODE></code>	<code>\$fh->print("BioPerl")</code>
Blocks of code	Indent it, or use PRE tags: <code><PRE> #!/usr/bin/perl -w use strict; use Bio::Perl; </PRE></code>	<code>#!/usr/bin/perl -w use strict; use Bio::Perl;</code>
Colored Perl code	<code><perl>my \$db = Bio::DB::GenBank->new</perl></code>	<code>my \$db = Bio::DB::GenBank->new</code>
linked_stuff	<code>[[Is:Annotation]]</code>	<u>Is:Annotation</u>
